

The network is the computer

Globalisation engineering at Sun Microsystems Ireland

Dolores Eccles, Sun Microsystems Ireland

Monday, 21 November 2005

10:00 – 11:00

University of Limerick

Room CSG01 (Computer Science Building)

What is Globalisation Engineering?
Software Development in Sun Microsystems Ireland
Looking for a part-time student position with Sun?

The LRC invites you to this year's localisation seminar series. The LRC 2005 Seminar Series features distinguished experts examining different aspects of localisation, including jobs & careers, tools & technologies, project management, research & development, and cross-disciplinary issues. These seminars provide the ideal environment for the exchange of ideas and strengthen the already existing valuable links between academia and the localisation industry.

About this session

Dolores Eccles Lavelle from Sun Microsystems will host a talk which includes an introduction to the company, an overview of its software development centre in Ireland and an insight into the Globalisation team's activities. There will also be an opportunity to find out about our part-time student positions.

Who should attend?

This seminar is aimed at students, faculty members and professionals interested in software development and globalisation engineering.

About the speaker

Dolores has been working with Sun Microsystems for over nine years and has held a number of positions within the company. She is currently an engineering manager within the Globalisation team and holds a BSc in Computing and Information Systems from the University of Ulster.

About Sun Microsystems

Sun Microsystems is the company that invented the phrase *The network is the computer*. Sun's *vision*: Everyone and everything participating on the network. Sun's *mission*: To create the technologies and fuel the communities that power the Participation Age. Sun's *cause*: To eliminate the digital divide. Sun's *strategy*: We will engineer solutions to our customers' biggest, most important problems. We will share our solutions to grow communities, increase participation, and create world-changing new market opportunities. We will build and run the world's participation infrastructure to make sure the job is done right. One of Sun Microsystems' Strategic Software Development Centres is based in Dublin.

About the Localisation Research Centre (LRC)

The LRC at UL is the focal point and the research and educational centre for the localisation community. The LRC has become the focus point – at national and international level – for both those involved in the localisation industry and those requiring information about it. Indigenous and overseas companies, government departments and agencies, researchers and students, the media and international consultancy firms, and the European Commission regularly contact the centre when they require reliable and independent industry information. The LRC was established in 1995 with the support of Irish government agencies and has a 20-person strong Industrial Advisory Board. For more information visit www.localisation.ie.
